

**ABSTRACT OF THE DISCLOSURE****5      METHOD AND APPARATUS FOR ISOLATING FAILING HARDWARE IN A  
PCI RECOVERABLE ERROR**

10      A method, apparatus, and computer implemented  
instructions for isolating failing hardware in a data  
processing system. In response to detecting a recovery  
attempt from an error, an indication of the attempt is  
stored. A hardware component associated with the error  
is placed in an unavailable state in response to the  
15      error exceeding a threshold for errors.
